

Gallagher Installation Advice

Tension Spring 036257 and Strain Insulator 678061 black / 011032 white

The following we recommend when using tension springs (036257):

Where to place the first one?

As close as possible to the strainer post.

Use preferably a Super Strain Insulator (678061 black or 011032 white) .

see image below:

What distance?

This depends of the local situation but on average we recommend between every 500 to 700 meters.

At what tension?

When installing and tension the wire, measure the gap in the spring, compress the spring until it measures between 3 and 5mm for best results.
